Review Summaries and Statistics for 115 Bowling Balls

Updated ‘Real World’ Ratings for Every Ball
BJI BALL REVIEWER Joe Cerar Jr. provides hook, length and breakpoint ratings for each ball reviewed throughout the year. In BJI’s 30th annual Ball Guide, all of that data can be found in one place. Here is an explanation of numeric ratings:

HOOK RATINGS
35-45: Balls with lower total hook ranges, best suited for lighter oil concentrations. Players with slower speeds or higher rev rates may also prefer balls in this range for medium oil applications.
45-51: Balls with medium hook ability, best suited for the vast majority of “typical house shots” and some lower-volume Sport patterns. This hook range should be represented by the “centerpiece” ball in most arsenals.
51-60+: Balls with greater total hook, designed for heavier oil volumes. Players with higher speeds or lower rev rates, who need added lane traction, may also prefer balls in this range.

LENGTH RATINGS
8-12: Earlier rolling balls that read the lane sooner. These products generally come factory-sanded with lower grit surfaces, and match up well for speed-dominant styles and those bowling on longer oil patterns.
12-15: Medium-length balls that produce easier length through the midlane. Good for most house shots and medium-volume Sport patterns.
15-19+: Balls offering extra length for those bowling on lighter oil concentrations. Also beneficial for slower speed players, or those with higher rev rates needing added push downlane.

BREAKPOINT RATINGS
10-13: Slower-response balls that read the friction areas more gradually. This range may include balls with a urethane or mild reactive cover, designed for a smooth arc to the pocket. Also can help those with higher rev rates control motion and match up well from outside angles of attack.
13-15: Balls rated for slightly stronger and quicker reactions when encountering friction areas (as when the ball leaves the oil pattern). This range offers a balance of control and back-end angularity.
15-18+: Balls that respond more quickly and aggressively to friction areas. This range can help those with less hand action create more angularity near the pocket. Also preferred when playing deeper inside angles, which generally require more entry angle for above-average pin carry.

ABOUT THE BJI 30th ANNUAL BOWLING BALL GUIDE
FOR THREE DECADES, Bowlers Journal International has been reviewing bowling balls, helping readers select the equipment that best matches their game and the lane conditions they normally encounter.

In 2013, Joe Cerar Jr., who operates a successful pro shop in Milwaukee, Wis., reviewed 115 balls for his “No Holes Barred” column in BJI. What follows are summaries of those reviews, listed in alphabetical order by ball name, including the “Real World Ratings” that are explained on this page.

If you’re in the market for a new ball... or a new arsenal... you’ll want to take the 30th annual BJI Ball Guide with you when you visit your local pro shop.
